Note: - This is from your syllabus for important topics to prepare. It will help in your exam but you have to complete all syllabus and these topics basic to advance all related topic. Prepare for 10 marks question.

1. Machine learning ,
2. Types of ML in detail with Algorithm,
3. Regression,
4. Classification clustering,
5. Decision tree learning,
6. Curve fitting,
7. Deep Learning,
8. Graphical models,
9. Kernel Trick,
10. Underfitting and overfitting,
11. Margin maximization,
12. Architecture back propagation network,
13. Least Squares estimation,
14. Sigmoid function,
15. SVM,
16. Backpropagation,
17. Gaussian Mixture Model,
18. Linear algebra,
19. Linear Regression,
20. Generative and discriminative models,
21. Regularization,
22. Linear Algebra mathematical foundation,
23. Probabilistic classification,
24. Matrix computations,
25. Vector spaces,
26. Kernel,
27. Computational complexity,
28. Decision boundary formation,
29. Bayesian networks
30. KNN
